# Statement of Purpose

## Introduction

**I still remember the first time I typed "Hello, World!" and felt nervous about how I'd ever manage to understand bigger programs. But soon I realized that coding wasn't just a skill—it was a way for me to express myself. It's a language that can solve problems, share stories, and shape the future. As I grew up, I became fascinated by how technology could change lives. It connects people from different parts of the world, helps doctors detect diseases earlier, and lets scientists study climate change. For me, these were more than just ideas—they proved that human creativity, combined with technology, can do amazing things. This curiosity led me on a lifelong journey to become a technologist who uses my skills to innovate and support communities. Along the way, I also discovered a passion for storytelling through films and scripts. I saw how stories, like algorithms, influence how people think, feel, and act. Directing short films that explored psychological themes and connected them to ancient religious texts helped me approach problems with both empathy and logic. These experiences shaped my vision: to use technology not just to create, but to build solutions that are both powerful and thoughtful.**

---

## Academic Accomplishments

**I will soon finish my undergraduate degree in Computer Science, with a focus on cloud computing. This journey pushed me to think beyond theory and understand how ideas can be applied in the real world. I learned PostgreSQL, Python, Java, and AWS and used them in projects that combined creativity with problem-solving. One of my proudest achievements was InnerEcho, a platform that uses sentiment analysis and secure journaling to help people improve their mental health. This project showed me that technology has the greatest impact when it meets human needs with care. Another important project was the Cloud Trace Threat Detection System, where I designed Spark-based data pipelines and built XGBoost models to find anomalies in server logs. Deploying this system on AWS improved my ability to create scalable and reliable solutions, and it taught me that the best systems adapt easily to real-world challenges.**

**During my internship as a Python Developer at Shadow Fox, I further developed this mindset. I created automation tools and improved workflows, including an image embedding system for Excel-based reporting. What started as a routine technical task became a chance to mix precision with creativity. I streamlined processes, reduced delays, and made complex systems more user-friendly. These academic and professional experiences taught me resilience, collaboration, and how to innovate under pressure.**

**Outside of school, I looked for ways to express my creativity and sense of responsibility through activities that directly reach people. I wrote "Surya: The Guardian of the Sun", a comic book that blends superhero stories with environmental awareness and community service. Storytelling helped me bring imagination and purpose together and inspired young readers to see environmental protection as a heroic act. I also wrote and directed scripts like "Broken – Act on Pahalgam Attack", "Void – The World of Helel", and "Azrael – Feared by Many Ordered by One", which raise awareness about modern crimes and mental health through narrative. These projects strengthened my belief that technology and storytelling can help people understand and take action on complex issues.**

**My volunteer work has also made a big difference. Organizing coding workshops for schoolchildren showed me how powerful education can be. Watching young learners write their first lines of code reminded me of my own start and reinforced my commitment to making knowledge more accessible. These activities helped me develop leadership, communication, and organizational skills, and they deepened my sense of responsibility to use my abilities to create lasting value for society.**

---

**Why I Want to Pursue My Masters at RWTH Aachen University?**

**The RWTH Aachen University Scholarship deeply resonates with me because it reflects a belief I hold dear: that education and achievement should go hand in hand with service and impact. RWTH Aachen seeks individuals who are not only skilled but also dedicated to making a difference. It feels like my journey and mission. This scholarship would remove financial barriers that might limit my ability to commit to advanced studies and connect me with a global community of innovators who share my values of inclusion, responsibility, and purpose-driven innovation. Past recipients have created groundbreaking solutions, and I am inspired by the chance to join that legacy. For me, this**

**scholarship is more than financial aid—it is a confidence boost in my potential and a catalyst that will enable me to pursue my goals with clarity and determination.**

**At RWTH Aachen, I look forward to embracing a culture of innovation and teamwork. I'm eager to participate in hackathons, contribute to open-source projects, and tackle challenges that blend imagination with real-world problem-solving. I aim to contribute not only through technical skills but also through communicating complex ideas clearly and engagingly. I want to build bridges between technology and the communities it serves. My goal is to grow as a learner and inspire others, especially the next generation of technologists, to create with empathy, responsibility, and purpose.**

---

**What Would I Do Once I Get into RWTH Aachen University?**

**Looking ahead, I envision a career dedicated to developing global solutions for pressing societal challenges. I see AI and distributed computing as powerful tools to expand access to healthcare, strengthen climate resilience, and provide education for underserved populations. My goal is to ensure that technological progress reaches those who need it most, not just the privileged few. After graduating, I would be honoured to carry forward the values of RWTH Aachen University and the scholarship, using my skills as both a technologist and an advocate for ethical, inclusive innovation.**

---

**Conclusion**

**For me, the RWTH Aachen University Scholarship is not just a stepping stone. It is a commitment to excellence, collaboration, and ensuring that every piece of knowledge I gain has a meaningful impact. It represents a chance to merge my technical skills with my ideals and take a decisive step toward the future I have been pursuing since the day I typed "Hello, World!"**
